Test

1.0 point possible (graded, results hidden)

How does the level of human development change with age without special intellectual training?

- ☐ The level of development increases.
- ☐ The level increases up to a certain age, then remains unchanged.
- ☐ The level of development does not change with age.
- ☒ The level increases up to a certain point, then degradation takes place.

How does short term memory affect reading efficacy?

- ☐ A person with well-developed short term memory gets constantly distracted while memorizing which hinders reading.
- ☐ Does not affect at all, these are two unconnected processes.

- ☒ Well-developed short term memory increases reading efficacy as it helps to understand structure within a given paragraph/chapter.
- ☐ No right answer.

What are the bases of the concept of continuous learning?

- ☐ A human is naturally predisposed to development which is determined by evolution.
- ☐ The concept of continuous learning is based on the increasing speed of science and industry development.
- ☐ Based on societal demand in response to growing life expectancy.
- ☒ Based on the factors given in options 2 and 3.

What are the requirements introduced by the concept of continuous learning in regard to the level of cognitive skills' development?

- ☒ A person is required to keep a high level of cognitive skills' development throughout the whole life.
- ☐ A person should keep a high level of cognitive skills' development to reach their maximum in a profession.
- ☐ A person should have learned 3-4 foreign languages by the age of 25.
- ☐ A person should undergo refresher training.

What are "isolation" and "isolated training" in skill formation concept?

- ☐ Organizing the training process in that manner that the person is training separately to be distracted less.
- ☐ Individual approach, in which the tasks are set individually for each student.
- ☒ The way of practice when parts of skill are trained separately and are further united in one coherent skill.
- ☐ The correct answers are 1 and 3

Lost skill recovery

- ☒ happens faster than its initial obtaining.
- ☐ is equal in time to its initial obtaining.
- ☐ requires more time than its initial obtaining
- ☐ No right answer

The maximum efficacy in information exploitation is gained by

- ☐ using visual perception
- ☒ replication
- ☐ using audio perception
- ☐ using kinesthetic perception

An optimal mode for intellectual development is

An optimal mode for intellectual development is

- ☐ Solving intellectual tasks in stress mode
- ☐ Solving intellectual tasks alternating stressful and non-stressful situations
- ☒ Solving intellectual tasks without stress
- ☐ All the above

Miller's Number is

- ☒ A feature that describes a number of objects/processes/events which can stay in short term memory and long term memory
- ☐ A feature that describes a number of objects/processes/events which can move from short term memory to long term memory
- ☐ A feature that describes a number of objects/processes/events which can be consecutively held in short term working memory
- ☐ A feature that describes a number of objects/processes/events which can be held in apes' memory, chimpanzees in particular
